

## *More-Than-A Security System*

You can depend on the XTL™ Wireless Security System to provide strong security that will help keep your business, employees, and property safe. It's a wireless system, so installation is fast and clean, and you can relocate sensors, sirens, and other components to adapt to your changing business needs. The system comes custom configured to meet your requirements today, and you can modify or expand it in the future.

## RELY ON NETWORK OR CELLULAR COMMUNICATION

For the strongest protection, rely on a security service to constantly monitor your system and dispatch emergency responders.

## REMOTE SYSTEM CONTROL

The XTL Wireless Security System lets you control your security system from wherever you are.

- Turn the system on or off, and receive alerts any time there's an alarm or change in the system's status, all via text message
- Use the Virtual Keypad™ App to take total remote control of your system

Control much more than just the security system by adding Z-Wave control devices. Your smartphone or tablet becomes the ultimate remote control, able to:

- Turn interior or exterior lights on or off
- Control thermostats to reduce energy use
- Lock and unlock doors

## VIDEO SERVICE

Keep an eye on your business no matter where you are:

- Add up to six cameras, interior and exterior
- Automatically record video when motion is detected
- View and record live video on your smartphone or tablet
- Monitor employee activity or check in to be sure your business is secure

Don't settle for just a security system. Protect and manage your business with the XTL, the "more-than-a security system".
